### **DETAILED ACTION**

#### Election/Restrictions

1. Applicant's election without traverse of claims 1-20 in the reply filed on 8/27/04 is acknowledged.

2. Claims 21-25 have been withdrawn from further consideration pursuant to 37 CFR
1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on 8/27/04.

## Specification

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1 and 3-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Fu et al. (US 6,245,669, dated 6/12/01).

Application/Control Number: 10/774,081 Page 3

Art Unit: 2812

4. Fu shows the method as claimed in figures 4-8 and corresponding text, with first, second and third hardmasks 16, 18 and 21, wire line layer 14, insulating layer 30 and sidewall spacers 22/24/26.

- 5. Claims 1 and 3-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Ference et al. (US 6,534,389, dated 3/18/03, filed 3/9/00).
- 6. Ference shows the method as claimed in figures 1-8 and corresponding text, with first, second and third hardmasks 16, 18 and 20, wire line layer 14, insulating layer 54 and sidewall spacers 26/42/36/46. Contacts to memory devices are discussed.

## Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.
  - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

- 9. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 10. Claims 2 and 6-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ference et al. (US 6,534,389, dated 3/18/03, filed 3/9/00).

Ference shows the method substantially as claimed and as discussed in the previous paragraphs. The conductive layer is made of polysilicon.

Ference lacks anticipation only in not explicitly teaching that the method is applicable to a bit line structure and associated parameters.

It would have been obvious to one of ordinary skill in the art to have used the method taught in Ference to pattern bit line structures with the associated parameters, with the motivation that Ference teaches that the conductive lines and contacts are made in association with memory cells, capacitors and devices. A bit line configuration would be an obvious variation of use of the method, along with associated parameters of the bit line structure, such as nodes, tungsten bit line formation, barrier formation, capacitor contacts, etc. Additionally, the thickness of the hard masks, the materials of the hardmasks and spacers are considered to be parameters of optimization.

Application/Control Number: 10/774,081

Art Unit: 2812

### Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the PTO Form 892 for Tang et al., Sung et al., and Ye et al. for alternative multi-layered masking techniques. See Mandelman for application to memory devices.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lynne A. Gurley whose telephone number is 571-272-1670. The examiner can normally be reached on M-F 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Niebling can be reached on 571-272-1679. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
